Stage to Shelf:

From Grammy Night to Your Next Fit

Shop the limited-edition merch drop inspired by music's biggest night

Choose your campaign objective

Drive targeted traffic to Grammy.com with messaging designed to inspire action.

This campaign directs highly engaged music fans to the Grammy merchandise store during the peak interest period following the awards ceremony. Fashion-forward messaging and time-sensitive merchandise drops encourage users to click through and purchase while excitement around the event is still high.

Targeting Criteria

Demographics

- Age 22–35
- U.S. urban markets
- All genders

Behaviors

- Engages with music content
- Shops via Instagram/mobile
- Follows music influencers

Interests

- Grammy Awards
- Music artists & fan communities
- Fashion & streetwear

Platforms

- Instagram
- TikTok
- Pinterest

Targeting Justification

The targeting strategy focuses on music fans aged 22–35 who actively engage with artist content, award show highlights, and fashion trends on social media. These users are likely to revisit Grammy performances, follow artists, and engage with music culture after the ceremony, keeping them in the high-interest window for merchandise purchases. By targeting interests related to music, pop culture, and fashion alongside behaviors like online shopping and social engagement, the campaign increases the likelihood of reaching users who will both interact with the content and convert into merchandise buyers.

Choose social media channels & ad type(s)

Instagram
Feed Ads
Stories Ads

TikTok
In-feed Video Ads
Creator-Style Short Videos

Pinterest
Promoted Pins
Shopping Pins

Instagram, TikTok, and Pinterest were selected because they are highly visual platforms where users engage with music, fashion, and pop culture content. Instagram and TikTok allow short-form video and influencer-style ads that showcase Grammy-inspired outfits and merchandise. Pinterest supports product discovery through visual inspiration and shopping pins, helping drive traffic to the Grammy merchandise store.

HEY SUPER EXCITED TO SHARE MY NEWEST PROJECT WEEK 7 COMPLETED!!!!!!

🚀 Building a Paid Social Media Campaign for the GRAMMY Awards

As part of my Global Career Accelerator program, I recently developed a paid social media campaign strategy designed to increase merchandise sales following the GRAMMY Awards.

My campaign concept, “From Grammy Night to Your Next Fit,” focuses on turning the excitement of music’s biggest night into fashion-forward merchandise fans can wear every day. The strategy targets music fans who actively engage with artist content, award show moments, and fashion trends across platforms like Instagram, TikTok, and Pinterest.

Through this project, I gained hands-on experience with:

- audience targeting and persona development
- paid social platform strategy
- ad format selection and campaign messaging
- analyzing campaign performance metrics like CTR, CPC, and CPA

This project helped me better understand how brands can turn cultural moments into meaningful engagement and conversions through strategic social media advertising.

Excited to keep building skills in digital marketing, social media strategy, and campaign analytics.

Analyze Campaign Data

Calculate this campaign's CTR, CPC and CPA and add them below. Feel free to reference the formulas in the last slide of this presentation.

	Budget	Spend	Impressions	Clicks	Conversions (Sales)	CTR	CPC	CPA
Grammys Ad data	$150,000	$9,000	1,800,000	4,500	300	[0.25 %]	[$33.33]	[$500]

<u>Benchmarks:</u>
CTR: 2%
CPC: $2.00
CPA: $15.00

Interpret Metric Results

1. Using the data from the previous slide, compare each KPI's benchmark to your campaign result. Calculate the % difference for CTR, CPC, and CPA, then enter your results below.

CTR Result : [0.25%

Benchmark	2%
Result	0.25%
% Difference	-87.5%

CPC Result : $33.33

Benchmark	$2
Result	$33.33
% Difference	1566.5%

CPA Result : $500

Benchmark	$15
Result	$500
% Difference	3233.3%

The campaign results fall below benchmark performance. CTR is significantly lower than expected, indicating limited engagement with the ads. Additionally, CPC and CPA are much higher than the benchmark values, suggesting the campaign is not cost efficient. Improvements in audience targeting, ad creative, and platform optimization would likely increase engagement and reduce acquisition costs.
