Project | charity: water Landing Page

After you've created the landing page and deployed it on GitHub Pages, paste the link below. Then, reflect on your experience to prepare for job interviews and professional networking.

1. Paste your website's URL here
Make sure to share your GitHub Pages, and NOT a link to your repository or Codespace. The CORRECT kind of link should look like this:

https://username.github.io/your-repo-name

```
https://samantha1686.github.io/charity-water-page/
```

2. Reflect on the process of building websites with AI. What was it like? Is this the first time you've done that kind of thing? What surprised you? What did you learn from it?

(Paste or write your answer below 👇)

Using AI to support my first experience building a website was genuinely fascinating, and I thoroughly enjoyed the process. It was my initial attempt at web development, and I was especially struck by how quickly I could upload my mockup and immediately see what the site would look like in a browser. This experience taught me the importance of being precise in the instructions I give to AI, and I also realized that achieving the result I want requires ongoing refinement—testing, adjusting, and tweaking until the design matches my vision.

3. Write up your answer to the following interview question: *"Tell me about a project where you used AI as part of your workflow?"*

(Paste or write your answer below 👇)

In a recent project, I used AI as a core part of my workflow while building my first website from scratch. I was new to web development, so I treated AI as both a coding assistant and a tutor. I started by describing the kind of site I wanted to create, including the visual style and basic structure, and the AI-generated starter HTML, CSS, and simple JavaScript that I could test in a browser immediately.

One of the most impactful moments was how quickly I could go from a static mockup to a working prototype. I was able to upload the mockup, integrate the AI-generated code, and see a live version of the site almost instantly. That rapid feedback loop made it much easier to experiment, iterate on design choices, and build confidence.

Throughout the project, I learned that the quality of the AI's output depended heavily on how precise my prompts were. When I asked vague questions, the responses were less useful; when I gave clear constraints—such as "beginner-friendly," "mobile-first," or "keep the CSS simple"—the code matched my needs much better. I also realized that using AI isn't a one-and-done step; it's an iterative process. I would generate a version, test it, then refine my request and adjust the code until the result aligned with my vision.

Overall, this project taught me how to incorporate AI as a collaborative tool rather than a shortcut. It accelerated the technical parts of the work, allowed me to focus more on design and user experience, and helped me build foundational skills in web development while still producing a functional, visually coherent website.

Preparation is key for interviews. Prepare by working on your answers well in advance and build interviewing skills while still in college!

Try this prompt

Below, I'm pasting in my answer to an interview question about a project I did in a career accelerator program.

Act as my interviewer (a hiring manager or recruiter) for an early-career job in **[insert industry or desired role].**

Analyze my answer for strengths and weaknesses and suggest ways to improve it.

4. Write up **a short LinkedIn post documenting your learnings** in the second week of this program

You can reflect on working with AI, learning web development, working with others, or what you learned about yourself. Consider adding media to draw attention to your post (e.g. an image or link of the landing page).

Actually posting it to LinkedIn is optional, but highly recommended! Even if you do, **please don't submit screenshots**.

Below, paste or type the text of your LinkedIn post

(Paste or write your answer below 👇)

https://samantha1686.github.io/charity-water-page/

Working on the development of my website has been an enlightening experience, particularly in learning how to effectively use AI in the process. It was fascinating to dive deeper into the intricacies of web development while ensuring that my work aligned with the mockup I created.
Through this journey, I discovered my passion for creating websites, games, and apps. This newfound interest has led me to make a significant decision: I am changing my major to marketing. I can envision a future in this field, and I am excited about the possibilities that lie ahead.

I did post this to LinkedIn

— Save and submit your work!

Great work completing this Project! To submit your work, download / export this document as a PDF and then upload it to the Project

submission page on HQ. You can find the option to download as a PDF from the File menu in the upper-left corner of the Google Doc interface.
