Hi Samantha! Saving the planet one repurposed device at a time? Yes please! 🌍💻 This project highlights how device age, energy savings, and CO2 reductions all connect to real sustainability impact. Let's take a look at your Glows ⭐ and Grows 🌱!

Glows ⭐
You crushed Part 1! Your device_age formula was spot on, you correctly identified text vs. numeric columns, and sorting by model year made your conclusion clear and data-backed. Awesome explanation on why newer devices may be repurposed more often than older devices. That is real analyst energy! 👐

In Part 2, you used COUNT and AVERAGE correctly to calculate key metrics and showed a strong understanding of how to turn raw data into clear, real-world insights. Excel win!

In Part 3, your COUNTIF and AVERAGEIF formulas accurately calculated total laptops and desktops repurposed, along with their average energy savings.

You provided four strong key takeaways and supported each one with your calculations and data. That is exactly how a data analyst turns numbers into meaningful insights.

You provided a strong, data-backed recommendation for Intel by targeting mid-year devices through buyback programs or incentives to boost energy savings and CO2 reductions. Great strategy that is actionable and clearly connects back to your analysis and data.

Grows 🌱

Take another quick look at your summary table. It seems like the device_age and energy_savings ranges got switched in your AVERAGEIF formula, so it is not calculating the average energy correctly. Try swapping those ranges and you should see the correct values pop in. You're very close!

Great job sharing in your ChatGPT reflection how it introduced ideas like a buyback program and tax incentives. To strengthen it, expand a bit on what AI helped you understand about why those strategies are effective or what did you learn about them that made you want to include them in your recommendation to Intel. I also like that you connected these ideas to your personal experiences and recognized that other customers may value similar incentives. 🤖💡

Man, you really EXCEL-ed at this project! 🔋 Keep charging ahead. Your Excel skills power a greener future! If you ever need anything at all, please don't hesitate to reach out!
